Ramesh Ganamana

Automation Engineer

Hyderabad, India | 7993897925 | rameshganamana799@gmail.com | linkedin.com/in/ramesh-ganamana-8b211a251

PROFESSIONAL SUMMARY

Automation Engineer with 4+ years of experience in Web, Mobile, and AI-powered automation testing. Skilled in Python, JavaScript, and building scalable automation frameworks using Selenium, WebDriverIO, Playwright, and Appium across logistics, insurance, and event management domains.

Hands-on expertise in AI-driven automation including MidScene.js, OCR-based validation, and voice automation using speech recognition models. Strong in test strategy, framework development, debugging complex issues, and improving automation stability and coverage.

Experienced with CI/CD pipelines using Azure DevOps and Jenkins, ensuring faster, reliable, and continuous quality delivery.

SKILLS

Programming Languages: Python, JavaScript

Automation Tools: Selenium, Appium, WebDriverIO, Playwright, BrowserStack

Testing Frameworks: PyTest, Mocha, Cucumber

CI/CD Tools: Azure DevOps, Jenkins

Version Control: Git

Reporting Tools: PyTest-HTML, Allure

Databases: SQL

Testing Types: UI Testing, API Testing, Database Testing, Functional Testing, Mobile Testing

WORK EXPERIENCE

Automation Engineer, Feuji Inc, Hyderabad **Sept 2022 – Present**

- Developed a complete end-to-end Cypress automation framework from scratch, supporting stable and fast web regression testing.
- Created an AI-powered automation framework using MidScene.js, enabling intelligent element recognition and AI-based automation flows.
- Performed mobile browser automation on Android devices using Playwright, ensuring cross-browser stability and consistent execution.
- Maintained and enhanced internal automation tools, performed upgrades, fixed defects, and improved reliability by identifying and reporting critical issues.
- Improved QA efficiency by optimizing locators, reducing flaky tests, streamlining execution pipelines, and collaborating with developers and QA teams.
- Received Best Employee recognition for outstanding contributions across 3 major projects.

PROJECTS

Encore

Tech Stack: JavaScript, Playwright, Allure Reports, Jenkins

- Conducted manual execution of all client-provided test cases to ensure complete functional coverage.
- Developed a Playwright-based Page Object Model framework with reusable and modular components.
- Integrated Allure Reports for detailed test insights and failure traceability.
- Automated test case execution through Jenkins for weekly regression cycles.
- Debugged issues, resolved automation failures, and maintained high script stability.

OTOR (Mobile Automation)

Tech Stack: Python, PyTest, Appium, BrowserStack

- Conducted comprehensive manual testing by executing all client-provided test cases, ensuring full functional coverage for the OTOR mobile application.
- Developed a robust Python-PyTest automation framework using the Page Object Model (POM), resulting in clean, maintainable, and scalable test automation.
- Integrated PyTest HTML reporting with automatic screenshot capture and embedded screenshots for improved debugging and visibility.
- Automated critical end-to-end mobile scenarios, significantly boosting test efficiency and reducing manual effort.
- Integrated automation suite with BrowserStack enabling cross-device and cross-OS regression testing and parallel execution.
- Performed weekly regression runs on every build release, analyzed functional and UI changes, conducted deep root-cause analysis, and collaborated closely with developers for defect resolution.
- Designed and implemented a dynamic voice assertion technique to capture audio responses, convert them to text, and validate expected results.

FasTrac

Tech Stack: Python, PyTest, SQL, Selenium, PyTest HTML Reports

- Conducted comprehensive manual testing by executing all client-provided test cases, ensuring full functional and workflow coverage for the FasTrac application.
- Developed a stable and scalable Python-PyTest automation framework using the Page Object Model (POM) for modular and maintainable automation.
- Built a reusable SQL utility that retrieves test data, injects it into UI flows, updates values, and revalidates them in SQL, enabling full end-to-end UI and DB validation.
- Designed an automated mechanism using Azure DevOps API to update test case status (Pass/Fail) based on automation results, improving traceability and client satisfaction.
- Implemented EasyOCR-based text extraction to validate on-screen content where direct locator access was not possible.
- Enhanced PyTest HTML reporting with embedded screenshots, improving debugging efficiency and overall failure visibility.

EDUCATION

Bachelor of Science in Computer Science — Andhra University, 2022 (CGPA: 8.0/10)
